

Server & PC Support

Hardware running at optimum performance

ITX has 13 years experience serving businesses in northern Colorado. Our job is to make sure your computers and networks are running at optimum performance, including:

- **Network Site Assessment:** it's like a "home inspection" on your network. ITX will diagram the network, analyze every workstation/server, then document our findings.
- **Workstation Maintenance:** don't be slowed down by viruses or software programs that aren't functioning properly.
- **Server Maintenance:** your server is your lifeline and routine maintenance will increase its speed, performance, and lifespan.
- **Internet Connection:** make sure everyone can access the Internet through shared Internet connectivity. We support various media and connection types, e-mail, firewall configuration, and other Internet protocols.
- **Desktop Application Support:** we can support your critical business applications such as Microsoft Office – offering a locally-staffed Help Desk plus on-site support.
- **Technology Integration:** get the most from the introduction of new technology. ITX will make sure you have the proper infrastructure in place to support the technology including the cables, connectors, routers, hubs, switches, and racks.
